

A title slide

Hello there! This is a demo of my slide processor.

Markdown should work

- This is a markdown sample
 - Still a bit sampling
- Very markdown

1. Mark
2. Down
3. ???
4. Profif

Another slide

```
1  def fact(x):  
2      if x == 0:  
3          return 1  
4      else:  
5          return fact(x - 1) * x
```

Note the numbering of the line files. Also note this note.

Some math

An example paragraph 1 with some $\sqrt{2}$ math.

Brought to you by the $\int_0^1 \frac{\sin x}{x} dx$ gang.

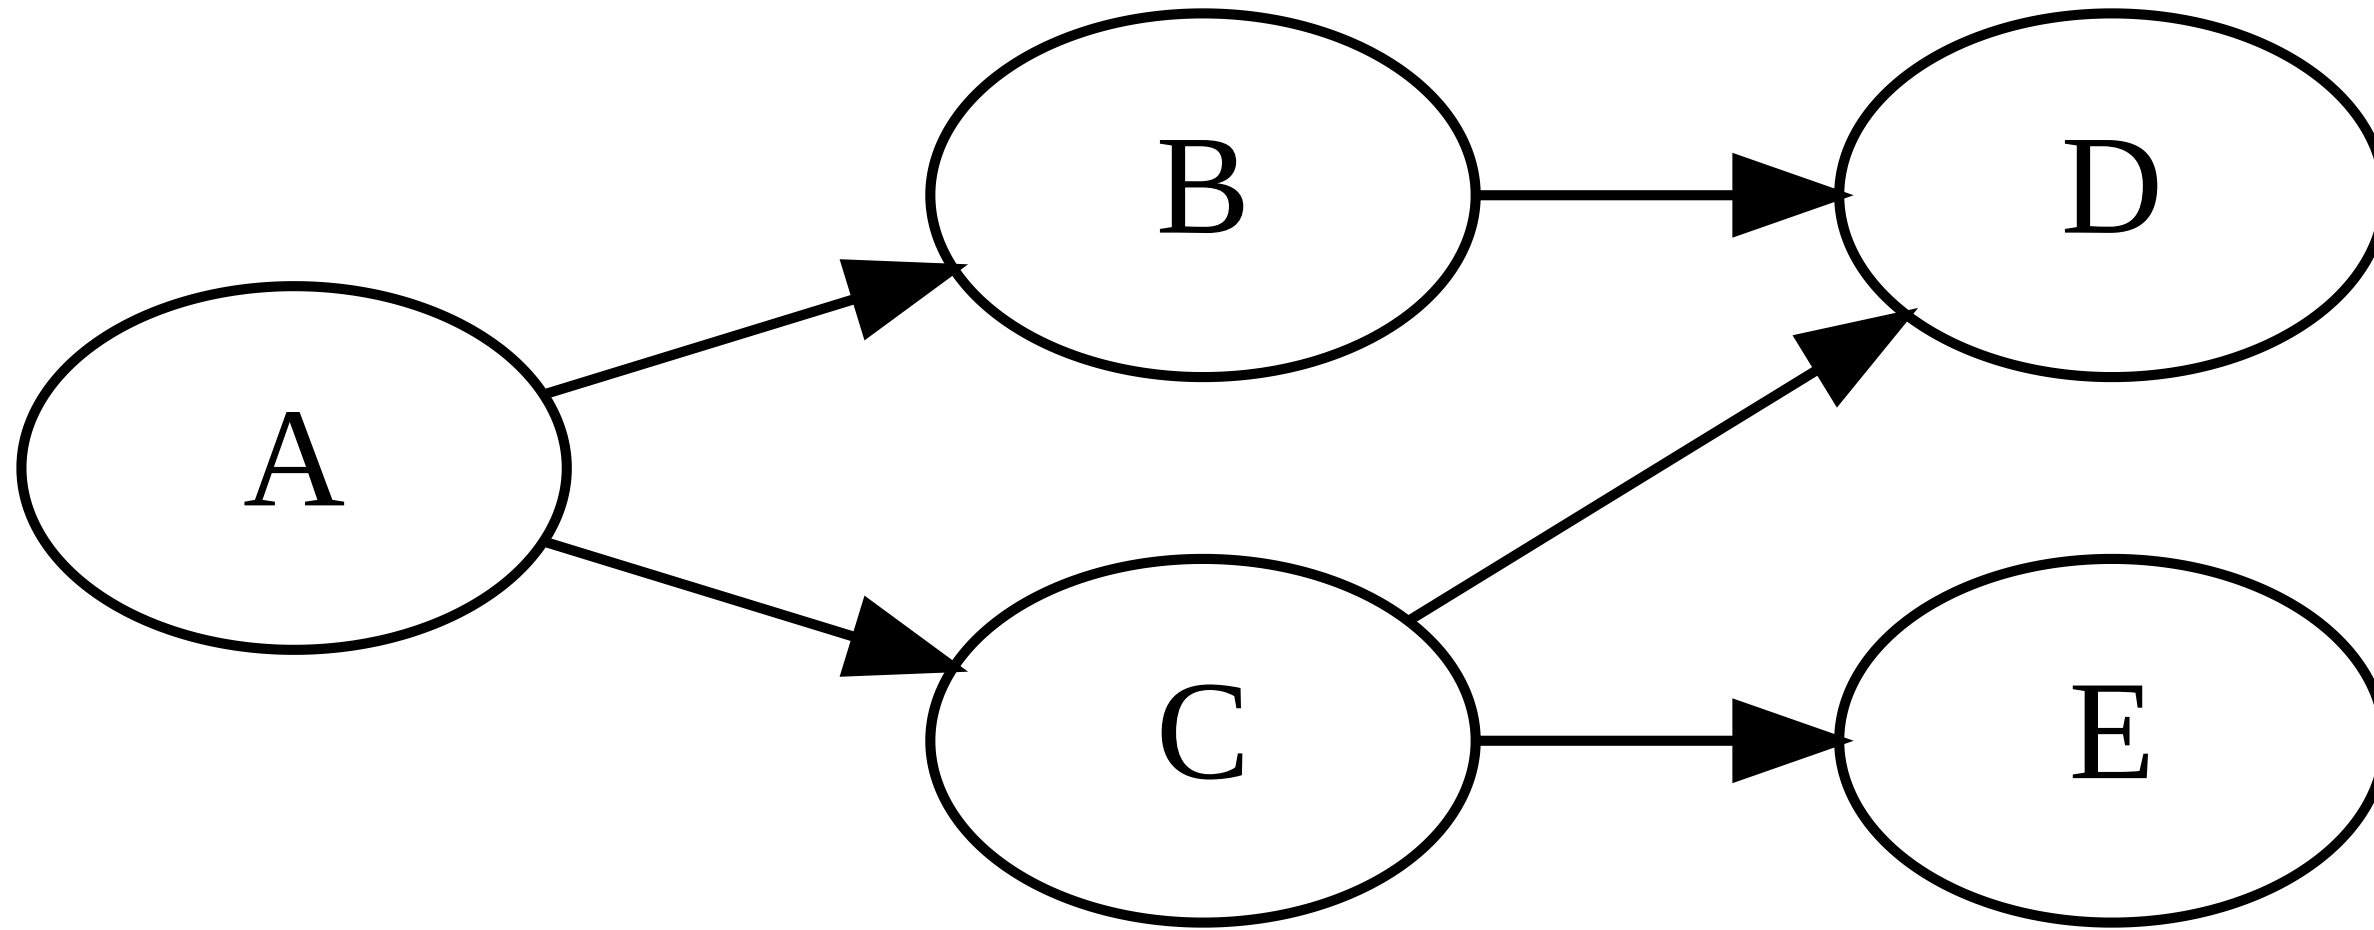

$$\int \sin(x^2) dx$$

\backslash

subparLatexSkills

(x)

A graph

Some more text under the graph.

And even more text.

Just to demonstrate auto-fitting of the graph above. yes it is magical. no I have never heard of `object-fit` before and tried to implement it manually. yes I like to hurt myself.
