A title slide

Hello there! This is a demo of my slide processor.

Markdown should work

- This is a markdown sample
  - Still a bit sampling
- Very markdown

1. Mark
2. Down
3. ???
4. Profif

Another slide

```
1        def fact(x):
2            if x == 0:
3                return 1
4            else:
5                return fact(x - 1) * x
```

Note the numbering of the line files. Also note this note.

Some math
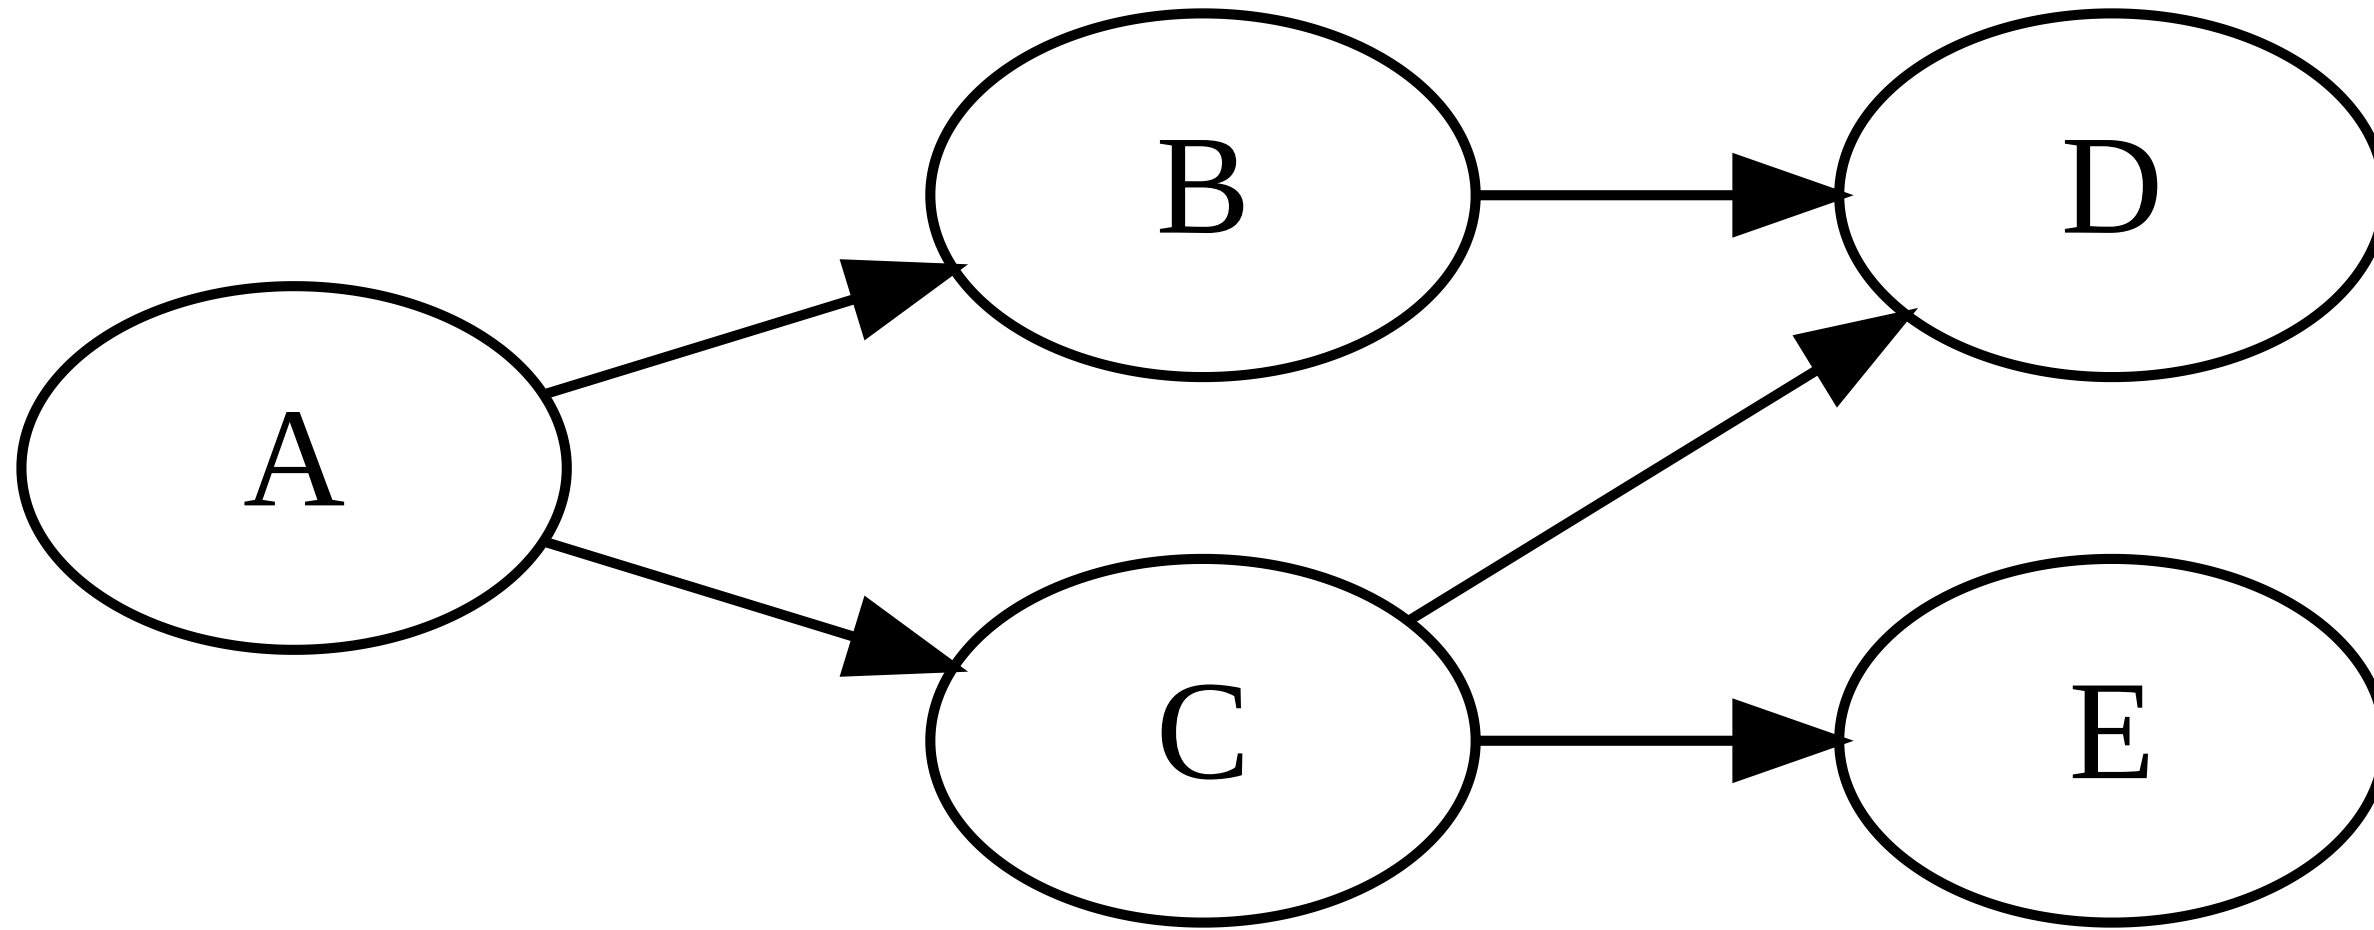

An example paragraph 1 with some $\sqrt{2}$ math.

I have $$ (i am debt).

Brought to you by the $\int_0^1 \frac{\sin x}{x}\, dx$ gang.

$$\int \sin(x^2)\, dx$$
$$\setminus\text{subparLatexSkills}(x)$$

A graph

Some more text under the graph.

And even more text.

Just to demonstrate auto-fitting of the graph above. yes it is magical. no I have never heared of `object-fit` before and tried to implement it manualy. yes I like to hurt myself.

A chart example
